Description Simple helpers for matrix multiplication on data.frames. These allow for more concise code during low level mathematical operations, and help ensure code is more easily read, understood, and serviced.

`mm`*Matrix Multiplication*

Description

Multiplies two matrices. A wrapper around `'matmalt()'` (i.e. `'data.frame's`

Multiplies two matrices. A wrapper around `'matmalt()'` (i.e. `'data.frame's`

Usage

```
mm(x, y, return_matrix)
```

```
"%mm%"(x, y, return_matrix)
```

Arguments

`x` A numeric matrix or vector

`y` A numeric matrix or vector

`return_matrix` Defaults to returning a data.frame (FALSE). Set to TRUE to return a matrix

Value

The matrix product as a data.frame or matrix

The matrix product as a data.frame or matrix

Examples

```
x <- data.frame(a=c(1,2,3), b=c(5,6,7))
y <- c(2,2)
mm(x, y)
```

```
x <- data.frame(a=c(1,2,3), b=c(5,6,7))
y <- c(2,2)
x %mm% y
```
