

1 CDNmoney Data

In R, this package is made available with

```
> library("CDNmoney")
```

This package contains data used to construct Canadian monetary aggregates. There are no functions in the package, but the functions in the *ts* and *tframe* packages may be useful for working with the data. Also, the package *dfa* is being used for research with this data at the Bank of Canada.

The data is documented under *CanadianMoneyData* in the help system.
